Backend and platform engineer building and operating production systems in fintech. Currently at Kifiya Financial Technology, working solo across a large-scale loan platform supporting over 11B in disbursement, owning backend services, microservices, frontend, and platform operations end to end. Experienced across Go, Node.js, Kafka, Redis, and PostgreSQL in event-driven, microservice architectures, with responsibility spanning system design, service boundaries, data integrity, and production reliability rather than feature delivery alone. Actively working as an agentic developer, using AI-assisted engineering workflows for delivery speed while keeping architecture, system design, and correctness decisions my own. Focused on scalable, secure systems and on owning problems end to end rather than tasks.

PROFESSIONAL EXPERIENCE

MID-LEVEL BACKEND DEVELOPER, IDD TEAM

Kifiya Financial Technology | May 2026 – Present

- Sole developer on the production loan platform since the lead developer's departure in May 2026, owning backend services, frontend, and service architecture end to end alongside continued senior platform administration responsibilities
- Contributing to platform development since joining in January 2026, initially working alongside the lead developer before taking full ownership of the codebase
- Designed and built microservices including an activity log service and a notification service, defining service boundaries, event flow, and integration with core platform services
- Work across Go, Node.js, Kafka, Redis, and PostgreSQL in a distributed, event-driven microservice architecture
- Deliver new-version development and platform enhancements while maintaining the running system, holding direct responsibility for uptime, data integrity, and release quality

SENIOR PLATFORM ADMINISTRATOR (SENIOR ASSOCIATE), MCP TEAM

Kifiya Financial Technology | Jan 2026 – Present

- Hired as Senior Platform Administrator with active involvement in platform development, system design, and operational management in a large-scale fintech environment handling high-volume loan operations and participant data
- Own production platform operations including system monitoring, incident handling, database operations, and continuous availability of financial workflows
- Support loan processing workflows across multiple banks, NGOs, and financial institutions on a platform enabling over 11B in loan disbursement
- Hold direct responsibility for data operations across large-scale loan and financial datasets, ensuring integrity, consistency, and correct handling in production
- Act as both developer and system interpreter, translating client and stakeholder requirements into platform design and technical implementation

SENIOR FULL STACK DEVELOPER (REMOTE)

Elisoft Technology | Feb 2023 – Apr 2026

- Joined as a junior full stack engineer and progressed to senior-level responsibilities through continuous delivery across production projects, working remotely alongside university studies
- Built and maintained full stack applications across frontend and backend systems, contributing to database design, API development, and system optimization in production environments
- Worked extensively on ERP platform development, delivering Inventory, HR, and core business workflow modules, including integration with external systems such as POS

DATA ANALYST & JUNIOR ERP CONSULTANT

ESIG Ethiopia Sugar Company | Jul 2025 – Jan 2026

- Bridged development teams, stakeholders, and consultancy representatives to translate business processes into structured technical specifications for developers
- Conducted requirement elicitation and on-site operational analysis, mapping real factory workflows into ERP system requirements
- Analyzed, cleaned, and structured operational and business data to ensure readiness for ERP integration, reporting, and system configuration

SOFTWARE DEVELOPER INTERN

EagleLion System Technology | Mar 2024 – Sep 2024

- Contributed to the development of a task management system, working across frontend and backend alongside the engineering team
- Worked within Agile delivery including sprint planning, standups, and code reviews, building practical experience in clean code, version control, and collaborative development

KEY PROJECTS

FINTech LOAN MANAGEMENT PLATFORM

Go, Node.js, Next.js, Microservices, Kafka, Redis, PostgreSQL, AWS, CI/CD, REST APIs

- Large-scale loan management platform processing high-volume loan and participant data across multiple financial institutions, supporting over 11B in disbursement
- Built backend services and APIs supporting loan lifecycle workflows, and developed activity log and notification microservices to extend platform capability
- Delivered system integration across external banking systems and internal services, ensuring accurate and consistent data flow under production load
- Improved platform reliability and performance through architectural refinement, debugging, and enhancement of live production services

ERP SYSTEM DEVELOPMENT: HR, FINANCE, INVENTORY MODULES

Laravel, Filament, CodeIgniter, Node.js, MySQL, PostgreSQL, REST APIs, Database Design

- Designed and delivered core ERP modules covering HR, finance, and inventory operations, including backend logic, database structures, and API integrations for workflow automation

SKILLS

Backend & Distributed Systems: Go (Golang), Node.js, Microservices Architecture, Kafka, Redis, REST API Design & Integration, Event-Driven Systems, System & Service Design

Databases: PostgreSQL, MySQL, Database Design, Query Optimization, Large-scale Financial Data Handling

Platform & Infrastructure: Platform Administration, Production System Support, System Monitoring & Incident Handling, CI/CD, AWS

Frontend: Next.js, React, Full Stack Delivery

Engineering Practice: Agentic / AI-assisted development workflows, Architecture-first problem solving, Solo ownership of production systems, Agile delivery

Data & Domain: Data Analysis & Processing, Data Integrity Management, Reporting (Metabase, Power BI, Excel), ERP Implementation, Fintech Domain Experience

Professional: Stakeholder Management, Requirement Elicitation, Client Communication (Banks, NGOs, Partners), Analytical Thinking

EDUCATION

MSc, Data Analysis
Addis Ababa University | Jan 2026 - 2029 (ongoing)

BSc, Software Engineering
Arba Minch University, Ethiopia | 2021 - 2025

ADDITIONAL

Personal Projects: AI-powered CV tool, RAG-based experiments, e-learning platform, Telegram bot automation, and a personalized recommendation system with university news feed as final year project, built alongside professional work to deepen system design and full stack engineering practice.

Volunteering: Charity Leadership & First Aid Volunteer, AMU Charity (2022 to 2025), certified for leadership in outreach programs focused on education and social impact.

Languages: Amharic (Native), English (Professional working proficiency)
